

PROPOSAL

AI-Powered Business CRM Platform – Proposal

Prepared for Zero Touch Pvt Ltd

21 August 2026

INVESTMENT

₹50,000

TIMELINE

ASAP

REFERENCE

PROP-2026-001

01 · STRATEGIC OVERVIEW

Executive Product Summary

The Product

Success means creating one simple platform where our team can manage the complete customer journey without switching between multiple tools. We want to reduce manual work, improve follow-ups, avoid missed tasks, and give the team a clear real-time view of every customer and project.

The Business Problem

Our customers currently use multiple disconnected tools for managing leads, communication, tasks, payments, and customer information. We want to bring everything into one platform and automate repetitive processes wherever possible.

The Solution

A unified, structured application combining authenticated workspaces, automated domain workflows, and centralized governance tailored specifically to Zero Touch Pvt Ltd's operating model.

Who It Serves

Designed specifically for Primary Customer / Client, providing tailored experiences aligned with their operational responsibilities.

The Business Value

Eliminates manual operational bottlenecks, guarantees data integrity with immutable audit trails, and establishes a scalable technical foundation for growth.

9 Core Modules

COMMITTED FUNCTIONAL SCOPE

02 · OPERATIONAL TRANSFORMATION

Current State vs. Target State

The following visual transformation details the operational shift from current operational constraints to the targeted digital capabilities delivered by this engagement.

OPERATIONAL WORKFLOW TRANSFORMATION MATRIX

Step-by-step contrast between current operational overhead and the proposed platform capabilities.

01. Input & Intake – CURRENT STATE

Currently, leads are received through websites, LinkedIn, WhatsApp, and referrals. The team manually records customer information, follows up through different communication channels, creates tasks, tracks project progress, and manages payments separately. This makes it difficult to see the complete customer journey in one place.

Impact: Delayed response times, missed requirements, and zero single source of truth.

02. Execution & Workflow – CURRENT STATE

Disconnected manual handoffs with ad-hoc tracking and unverified status updates.

Impact: Operational bottlenecks, duplicated effort, and untracked execution delays.

03. Visibility & Governance – CURRENT STATE

Periodic manual status reporting and opaque progress indicators.

Impact: Executive blind spots, reactive issue management, and reconciliation overhead.

TARGET PRODUCT CAPABILITY

Structured, validated digital interface deployed directly for Zero Touch Pvt Ltd.

Outcome: 100% structured data capture with automated prerequisite validation.

TARGET PRODUCT CAPABILITY

Automated state machine with real-time milestone transitions and task orchestration.

Outcome: Predictable, auditable delivery cadence with instant stakeholder visibility.

TARGET PRODUCT CAPABILITY

Continuous operational dashboard, immutable audit trail, and automated telemetry.

Outcome: Complete operational transparency with verifiable compliance and peace of mind.

03 · CLIENT PROFILE

Business Context & Opportunity

Enterprise Profile

We build custom software and AI-powered solutions for small and medium-sized businesses. Our main services include web application development, business automation, CRM systems, and AI integrations.

Customer & Market Profile

Our customers are startups, small businesses, and growing companies that need custom software to automate their daily operations and improve how they manage customers, employees, and business processes.

Core Market Differentiator

We focus on building practical solutions around each customer's actual workflow instead of providing a one-size-fits-all product. We combine full-stack development with AI automation to reduce manual work and make business operations easier to manage.

Strategic Engagement Goals

- 01 Increase revenue
- 02 Automate operations
- 03 Launch a new product
- 04 Improve customer experience
- 05 Reduce manual work
- 06 Grow to new markets

04 · SYSTEM TOPOLOGY

Product Blueprint & System Structure

The product blueprint illustrates how user entrypoints, presentation interfaces, domain modules, and data services interconnect into a cohesive, secure platform.

AI-POWERED BUSINESS CRM PLATFORM – PROPOSAL – PRODUCT BLUEPRINT

High-level component hierarchy and end-to-end workflow connectivity.

USERS: User Personas & Entrypoints

- Primary Customer / Client Experience

EXPERIENCE: Presentation & Client Interface

- Responsive Web Workspace
- Executive Analytics Console
- Stakeholder Action Portal

CORE_WORKFLOWS: Core Product Domain Engine

- Pages & content
- Contact forms
- Blog / news
- SEO

SERVICES_DATA: Application & Data Services

- Authentication & RBAC Gateway
- Relational Datastore & ACID Ledger
- Audit & Event Logger

INTEGRATIONS: External Services & Gateways

- Transactional Email Gateway
- Secure Payment Gateway

ADMIN_GOVERNANCE: Security & Operations

- Role-Based Access Control
- Data Encryption at Rest & In-Transit
- Automated Health Monitors

05 · FUNCTIONAL SPECIFICATION

Core Product Modules

Every major product module has been designed around concrete user actions, clear business rules, and testable outputs derived from your verified intake.

MOD-01: Pages & content

SHOULD HAVE

Delivers core pages & content capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Pages & content
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in pages & content and enforces data integrity.

MOD-02: Contact forms

SHOULD HAVE

Delivers core contact forms capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Contact forms
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in contact forms and enforces data integrity.

MOD-03: Blog / news

SHOULD HAVE

Delivers core blog / news capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Blog / news
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in blog / news and enforces data integrity.

MOD-04: SEO

SHOULD HAVE

Delivers core seo capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access SEO
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in seo and enforces data integrity.

MOD-05: Gallery / portfolio

SHOULD HAVE

Delivers core gallery / portfolio capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Gallery / portfolio
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in gallery / portfolio and enforces data integrity.

MOD-06: Newsletter

SHOULD HAVE

Delivers core newsletter capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Newsletter
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in newsletter and enforces data integrity.

MOD-07: Analytics

SHOULD HAVE

Delivers core analytics capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Analytics
- Execute operational workflows and state updates
- Query status, history, and real-time records

- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in analytics and enforces data integrity.

MOD-08: CMS

SHOULD HAVE

Delivers core cms capabilities with authenticated governance.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access CMS
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in cms and enforces data integrity.

MOD-09: Multilingual

SHOULD HAVE

The application should support multiple languages through a language selector available in the main interface. Users should be able to change their preferred language without logging out.

The selected language should apply consistently across navigation, buttons, forms, validation messages, notifications, dashboards, and system-generated content. The system should initially support English and Tamil, with the architecture allowing additional languages to be added later.

User-entered business data, customer names, project descriptions, and other custom content should not be automatically translated or modified unless translation is explicitly requested.

Primary Users: Primary Customer / Client

Core Actions:

- Authenticate and access Multilingual
- Execute operational workflows and state updates
- Query status, history, and real-time records
- Receive event confirmations and audit logs

Business Value: Eliminates manual latency in multilingual and enforces data integrity.

06 · USER EXPERIENCE

User Experience & Interaction Journeys

The platform provides purpose-built interaction journeys for each key stakeholder persona to ensure rapid adoption and zero operational friction.

USER JOURNEY – PRIMARY CUSTOMER / CLIENT

Primary Goal: Efficiently complete primary customer / client tasks with zero friction and instant feedback.

01 Secure Login & Session Initialization

Screen: Authentication & Role-Based Landing View

Validates credentials, checks active tenant status, and loads authorized workspace context.

02 Dashboard Review & Pending Action Discovery

Screen: Executive Overview & Task Queue

Displays real-time metrics, active items requiring attention, and prioritized queues.

03 Core Workflow Execution

Screen: Pages & content Workspace

Enforces business validation rules, updates relational state, and triggers background telemetry.

04 Confirmation & Output Review

Screen: Activity Ledger & Export View

Issues immutable confirmation reference and updates audit trail across all stakeholder portals.

07 · SCOPE BOUNDARIES

Product Feature Map & MVP Boundaries

To ensure delivery predictability and rapid time-to-value, features are classified strictly into MVP (committed for release) and Phase 2 enhancements.

ID	MODULE	FEATURE & PURPOSE	USER	RELEASE
PRD-001	Pages & content	Pages & content Delivers core pages & content capabilities with authenticated governance.	Primary Customer / Client	MVP
PRD-002	Contact forms	Contact forms Delivers core contact forms capabilities with authenticated governance.	Primary Customer / Client	MVP
PRD-003	Blog / news	Blog / news Delivers core blog / news capabilities with authenticated governance.	Primary Customer / Client	MVP
PRD-004	SEO	SEO Delivers core seo capabilities with authenticated governance.	Primary Customer / Client	MVP
PRD-005	Gallery / portfolio	Gallery / portfolio Delivers core gallery / portfolio capabilities with authenticated governance.	Primary Customer / Client	PHASE_2
PRD-006	Newsletter	Newsletter Delivers core newsletter capabilities with authenticated governance.	Primary Customer / Client	PHASE_2
PRD-007	Analytics	Analytics Delivers core analytics capabilities with authenticated governance.	Primary Customer / Client	PHASE_2
PRD-008	CMS	CMS Delivers core cms capabilities with authenticated governance.	Primary Customer / Client	PHASE_2
PRD-009	Multilingual	Multilingual The application should support multiple languages through a language selector available in the main interface. Users should be able to change their preferred language without logging out.	Primary Customer / Client	PHASE_2

ID	MODULE	FEATURE & PURPOSE	USER	RELEASE
		The selected language should apply consistently across navigation, buttons, forms, validation messages, notifications, dashboards, and system-generated content. The system should initially support English and Tamil, with the architecture allowing additional languages to be added later. User-entered business data, customer names, project descriptions, and other custom content should not be automatically translated or modified unless translation is explicitly requested.		

08 · REQUIREMENT MATRIX

Product Requirements & Traceability

Every requirement links backward to a validated business problem and forward to an acceptance criterion and delivery milestone.

REQ ID	Requirement Title	Source Module	User Role	Priority
REQ-001	Pages & content	Pages & content	Primary Customer / Client	MVP
REQ-002	Contact forms	Contact forms	Primary Customer / Client	MVP
REQ-003	Blog / news	Blog / news	Primary Customer / Client	MVP
REQ-004	SEO	SEO	Primary Customer / Client	MVP
REQ-005	Gallery / portfolio	Gallery / portfolio	Primary Customer / Client	PHASE_2
REQ-006	Newsletter	Newsletter	Primary Customer / Client	PHASE_2
REQ-007	Analytics	Analytics	Primary Customer / Client	PHASE_2
REQ-008	CMS	CMS	Primary Customer / Client	PHASE_2
REQ-009	Multilingual	Multilingual	Primary Customer / Client	PHASE_2

09 · VERIFICATION CRITERIA

Testable Acceptance Criteria

Each major product capability is governed by testable Given-When-Then acceptance criteria to guarantee objective verification before release.

AC-001: Pages & content

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for Pages & content

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

AC-002: Contact forms

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for Contact forms

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

AC-003: Blog / news

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for Blog / news

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

AC-004: SEO

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for SEO

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

AC-005: Gallery / portfolio

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for Gallery / portfolio

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

AC-006: Newsletter

GIVEN-WHEN-THEN

GIVEN An authenticated Primary Customer / Client with valid system permissions

WHEN The user initiates the primary workflow for Newsletter

THEN:

- Input parameters and operational constraints are validated.
- The state change persists with ACID integrity in the datastore.
- A unique reference identifier is assigned to the generated record.
- Authorized stakeholders receive real-time status reflection.
- Unauthorized access attempts return 403 Forbidden without leaking metadata.

Failure Behavior: Fails gracefully with actionable error feedback and zero partial state corruption.

10 · DATA BLUEPRINT

Domain Data Model & Entity Map

The domain data model defines the core entities, relationships, and lifecycle attributes required to support all business workflows with relational integrity.

RELATIONAL DOMAIN ENTITY STRUCTURE

Organization / Workspace

Root tenant container governing data isolation, team members, and enterprise configurations.

Attributes: id, name, slug, status, createdAt

Relations: hasMany Users | hasMany Projects | hasMany Records

User & Identity

Authenticated individual with cryptographically verified session and role permissions.

Attributes: id, email, name, role, lastLoginAt

Relations: belongsTo Organization | hasMany ActivityEvents

Pages&content

Primary transactional domain entity for pages & content management.

Attributes: id, referenceCode, status, metadata, updatedAt

Relations: belongsTo Organization | trackedBy AuditLog

Contactforms

Primary transactional domain entity for contact forms management.

Attributes: id, referenceCode, status, metadata, updatedAt

Relations: belongsTo Organization | trackedBy AuditLog

Blog/news

Primary transactional domain entity for blog / news management.

Attributes: id, referenceCode, status, metadata, updatedAt

Relations: belongsTo Organization | trackedBy AuditLog

11 · EXTERNAL SERVICES

Integration Architecture

The platform interfaces with verified external systems via secure, authenticated connectors with automated failure recovery.

Transactional Notification Gateway

COMMUNICATIONS

Automates external data exchange and synchronization for Transactional Notification Gateway.

DATA EXCHANGED Structured event payloads, webhook status updates, and transaction receipts.

TRIGGER Initiated upon milestone state changes or user-triggered events.

DIRECTION BIDIRECTIONAL

FAILURE PROTOCOL Exponential backoff retry with dead-letter logging and administrator alert.

Secure Payment Gateway

COMMERCIAL

Automates external data exchange and synchronization for Secure Payment Gateway.

DATA EXCHANGED Structured event payloads, webhook status updates, and transaction receipts.

TRIGGER Initiated upon milestone state changes or user-triggered events.

DIRECTION BIDIRECTIONAL

FAILURE PROTOCOL Exponential backoff retry with dead-letter logging and administrator alert.

12 · ENGINEERING STANDARDS

Technical Architecture & Security

The system is architected as a layered, modular application emphasizing security, type safety, and predictable execution.

LAYER	TECHNOLOGY	PURPOSE
Experience Layer	Next.js React Architecture	Responsive, high-performance client workspace.
Application & API Layer	REST / Server Action Dispatcher	Type-safe business logic orchestration and input validation.
Security & Identity	Secure Session Engine & RBAC	Tenant isolation, role permissions, and token validation.
Persistence Layer	ACID Relational Datastore	Structured domain records, audit trails, and atomic state.

Security & Governance Boundaries

SECURITY CONTROLS & THREAT MITIGATIONS

Authentication	Encrypted session tokens & password hashing — Prevents credential replay and session hijacking.
Authorization (RBAC)	Server-side policy enforcement on all endpoints — Guarantees strict tenant and record isolation.
Data Protection	TLS in-transit & AES-256 at-rest — Safeguards client records against interception.
Audit Trail	Immutable event logging with timestamp & actor ID — Provides non-repudiation and forensic visibility.

14 · INTERFACE CATALOG

Screen & Interface Inventory

The following screen inventory catalogs the primary application views engineered for stakeholder interactions.

SCR-001: Executive Command Center

User: Primary Customer / Client

Single-pane overview of operational status, key metrics, and urgent action items.

Key Info: Operational health KPIs · Urgent action queues · Recent activity timeline

Actions: Filter views · Drill down to records · Trigger new action

SCR-002: Pages & content Hub

User: Primary Customer / Client

Dedicated operational environment for managing pages & content.

Key Info: Filterable record table · Status chips · Audit log drawer

Actions: Create record · Edit state · Export data

SCR-003: Contact forms Hub

User: Primary Customer / Client

Dedicated operational environment for managing contact forms.

Key Info: Filterable record table · Status chips · Audit log drawer

Actions: Create record · Edit state · Export data

SCR-004: Blog / news Hub

User: Primary Customer / Client

Dedicated operational environment for managing blog / news.

Key Info: Filterable record table · Status chips · Audit log drawer

Actions: Create record · Edit state · Export data

15 · QUALITY ASSURANCE

Deliverables & QA Verification Model

All deliverables must pass strict automated and human verification gates before milestone acceptance.

WORKFLOW / FEATURE	TEST TYPE	EXPECTED RESULT	VERIFICATION GATE
End-to-End User Authentication & Tenant Routing	SECURITY_PERMISSIONS	Zero data leakage; immediate 401/403 rejection with audit logging.	Passed automated penetration and role-matrix test suites.
Core Domain State Machine Transitions	FUNCTIONAL	Valid transitions commit atomically; invalid transitions reject cleanly.	100% deterministic test coverage on domain state handlers.
External Integration Webhook Dispatch & Retry	INTEGRATION	System queues event with exponential backoff without dropping data.	Verified automated retry recovery in sandbox environment.

16 · DELIVERY SCHEDULE

Delivery Roadmap & Release Readiness

The engagement follows a disciplined 6-phase engineering roadmap executed over ASAP.

PHASED ENGINEERING & RELEASE ROADMAP

01 DISCOVERY & ARCHITECTURE ALIGNMENT

Detailed technical specification, schema finalization, and infrastructure provisioning.

Deliverables: Signed Technical Baseline · Architecture Blueprint · Staging Environment

Gate: Client sign-off on discovery specification.

02 FOUNDATION & CORE IDENTITY

Tenant isolation, authentication, database migrations, and navigation framework.

Deliverables: RBAC Engine · Database Schema · Base Layout & Shell

Gate: Successful authentication and session security audit.

03 PRODUCT MODULE ENGINEERING

Implementation of core modules: Pages & content, Contact forms, Blog / news.

Deliverables: Pages & content Functional Module · Contact forms Functional Module · Blog / news Functional Module

Gate: Internal QA passing 100% unit and functional tests.

04 INTEGRATION & WORKFLOW ORCHESTRATION

External API connections, email/notification dispatch, and transaction pipelines.

Deliverables: Integration Connectors · Event Dispatcher · Notification Service

Gate: Successful sandbox integration validation.

05 VERIFICATION, SECURITY & UAT

End-to-end user acceptance testing with client stakeholders, load and security audit.

Deliverables: UAT Sign-off Report · Security Audit Report · User Documentation

Gate: Zero critical defects and formal client acceptance sign-off.

06 PRODUCTION LAUNCH & WARRANTY

Production deployment, DNS cutover, telemetry monitoring, and warranty support.

Deliverables: Production Live System · Operational Handover · 30-Day Warranty

Gate: Live production system operational with verified health checks.

PRODUCTION LAUNCH CHECKLIST

Requirements approved ☑ Core workflows validated ☑ Integrations verified ☑ Security audited ☑ UAT signed off ☑
Production deployment.

17 · COMMERCIAL TERMS

Commercial Terms & Investment

Investment is structured under a Fixed price aligned with verified milestone completion.

Milestone / Deliverable Stage	Scope Included	Investment
01. Project Inception & Discovery	Architecture baseline, specification, and environment setup	₹15,000
02. Core Platform & Module Engineering	Delivery of core modules and functional workflows	₹20,000
03. Final Acceptance & Production Launch	UAT sign-off, production deployment, and handover	₹15,000
		Total Investment ₹50,000

Intake Budget Baseline: Below ₹50K

Commercial Governance & Scope Control

- 01 Milestone billings are invoiced upon successful completion of respective verification gates.
- 02 Third-party service fees (e.g. hosting, SMS/WhatsApp units, payment gateway processing) are billed directly by respective providers.
- 03 Any scope adjustments follow the formal Change Request governance process prior to execution.

18 · GOVERNANCE

Success Metrics & Risk Governance

Strategic engagement success is measured by concrete KPIs and proactive risk governance.

Risk Register & Proactive Mitigations

Dependency Availability

MANAGED

Delays in third-party API credentials or client inputs.

Impact: MEDIUM

Mitigation: Pre-provisioning sandbox credentials during Phase 01 discovery.

Scope Expansion

MANAGED

Emerging functional requests during active sprint cycles.

Impact: MEDIUM

Mitigation: Formal backlog grooming with Phase 2 deferrals via Change Control.

Data Inconsistency

MANAGED

Unformatted legacy data records.

Impact: MEDIUM

Mitigation: Automated pre-import schema validation and deduplication filters.

19 · SIGN-OFF & KICKOFF

Authorization & Immediate Next Steps

By approving this proposal, Zero Touch Pvt Ltd authorizes Youtube to initialize Phase 01 Discovery and commence execution under the terms detailed herein.

OFFICIAL PROPOSAL ACCEPTANCE

Authorized Client: Zero Touch Pvt Ltd

Scope: Full committed scope across 9 core modules (Ref: PROP-2026-001).

Acceptance Date: 21 August 2026

Verified Digital Signature: Cheralathan B.n

Immediate Engagement Kickoff Cadence

- 01 01. Digital acceptance confirmation received by the Delivery Team.
- 02 02. Architecture Kickoff scheduled with primary stakeholders.
- 03 03. Staging environment, repository access, and workspace provisioning initialized within 48 hours.
- 04 04. Sprint 01 Backlog confirmation and weekly cadence established.
